Insights

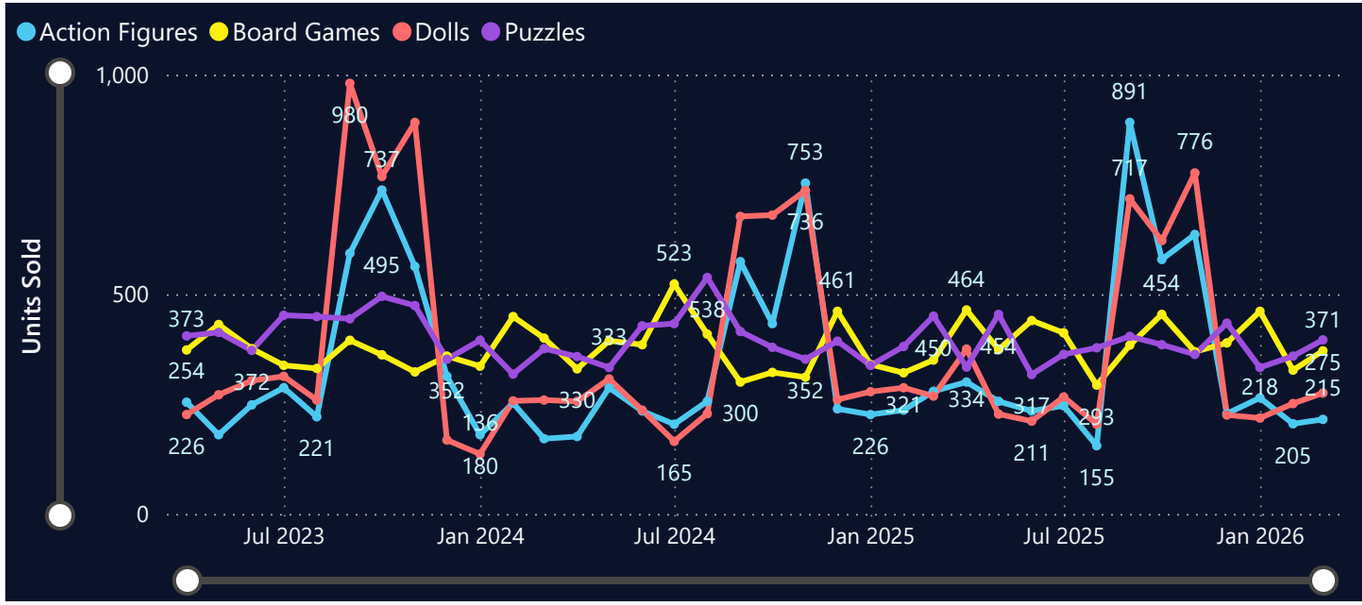

- **Board Games represent 31.6% of inventory value**, indicating the largest concentration of warehouse investment.
- **Festive season generated 19,537 unit sales**, outperforming every other season and confirming consistent seasonal demand.
- Stockouts occurred only **9 times across 3 products**, indicating replenishment issues are product-specific rather than systemic.
- Inventory investment is concentrated in a few products, presenting opportunities to optimize capital utilization.

Reccomendation

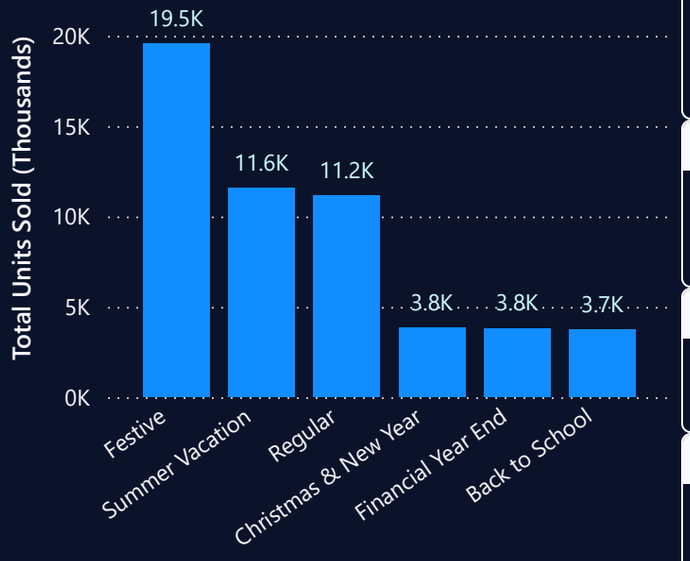

- Prioritize replenishment for products with recurring stockouts to reduce lost sales.
- Rebalance inventory by lowering stock levels for products with persistently high inventory value.
- Increase inventory before **Festive** and **Summer Vacation** periods using historical demand patterns.
- Continuously refine reorder points based on seasonal sales and stockout history.
